

MeetFlow — UI/UX Design Document

1. Design Objective

The goal of MeetFlow's UI/UX is to provide faculty members with a professional, simple and efficient meeting-management experience.

The interface should prioritize:

- Clarity
 - Simplicity
 - Accessibility
 - Consistency
 - Fast navigation
 - Minimal cognitive load
-

2. Design Concept

MeetFlow will follow the concept:

"Everything about your meetings, in one flow."

The overall user journey will be:

Schedule → Prepare → Meet → Record → Assign → Track

3. Visual Style

Design Style

- Modern
- Professional
- Minimal
- Clean
- Slightly futuristic

Avoid excessive animations and decorative elements because the application is intended for professional faculty use.

4. Color System

Suggested palette:

Usage	Color
Primary	Indigo / Deep Purple
Secondary	Blue / Cyan
Background	Light Gray
Cards	White
Success	Green
Warning	Amber
Error	Red
Text	Dark Gray

The exact colors can be adjusted after creating the visual prototype.

5. Typography

Use a clean sans-serif font.

Suggested:

- Inter
- Poppins
- Roboto

Use clear differences between:

Page Title → Section Heading → Body → Caption

6. Navigation

Desktop:

On mobile, navigation should transform into a hamburger menu or bottom navigation.

7. Dashboard

The dashboard should contain:

Header

Good Morning, Professor 🙌
Here's what's happening today.

Quick Statistics

- Today's Meetings
- Upcoming Meetings
- Pending Tasks
- Overdue Tasks

Today's Meetings

Each meeting should show:

- Time
 - Title
 - Meeting type
 - Location
 - Number of participants
 - Status
 - Action button
-

8. Meeting Creation UX

The meeting creation process should use a simple form.

Step 1 — Basic Details

- Meeting title
- Description
- Date
- Time
- Location

Step 2 — Participants

Search and select faculty members.

Step 3 — Agenda

Add agenda items.

Step 4 — Documents

Attach relevant files.

Step 5 — Review

Display a summary before final submission.

This multi-step approach prevents a large, overwhelming form.

9. Calendar UX

The calendar should provide:

- Day
- Week
- Month

Meetings should be visually differentiated according to their status.

Clicking a meeting should open a meeting-detail panel rather than forcing the user to navigate away immediately.

10. Meeting Detail Page

Recommended structure:

Department Meeting
13 September 2026 | 11:00 AM

Participants: 8

[Overview] [Agenda] [Documents] [Notes] [Tasks] [Minutes]

Agenda

- ✓ Department Updates
- ✓ Event Planning
- Examination Schedule

Action Items

Prepare event proposal
Assigned: Prof. Sharma
Due: 20 Sept
Status: In Progress

Tabs help keep the page organized.

11. Action Item UX

Tasks should have:

- Task name
- Assignee
- Deadline
- Priority
- Status

Use visual indicators:

- Completed
- In Progress
- Pending
- Overdue

Users should be able to update status without opening a separate page.

12. Notifications

Notifications should be short and actionable.

Example:

 Meeting starts in 15 minutes
Department Academic Committee
View Meeting

Another:

 Task deadline tomorrow
Submit event proposal
View Task

13. Empty States

Every page should have a useful empty state.

Example:

No meetings scheduled

Your calendar is clear for today.

[+ Schedule Meeting]

Avoid simply displaying:

"No data found."

14. Responsive Design

Desktop

- Sidebar
- Multi-column dashboard
- Full calendar

Tablet

- Collapsible sidebar
- Reduced card columns

Mobile

- Hamburger/bottom navigation
- Single-column layout
- Stacked meeting information
- Touch-friendly buttons

Minimum recommended touch target: approximately 44px.

15. UX Principles

Consistency

Buttons, colors, icons and terminology should remain consistent throughout the application.

Visibility

Important information such as upcoming meetings and overdue tasks should be immediately visible.

Feedback

After every important action, provide feedback.

Example:

✓ Meeting scheduled successfully.

Error Prevention

Warn users before actions such as:

- Deleting a meeting
- Cancelling a meeting
- Scheduling a conflicting meeting

Accessibility

The interface should provide:

- Good text contrast
- Keyboard navigation

- Labels for form fields
 - Alternative text for meaningful images
 - Clear focus states
-

16. Recommended User Flow

```
graph TD; A[Login] --> B[Dashboard]; B --> C[Schedule Meeting]; C --> D[Select Participants]; D --> E[Check Availability]; E --> F[Create Agenda]; F --> G[Confirm Meeting]; G --> H[Meeting Reminder]; H --> I[Meeting]; I --> J[Notes + Decisions]; J --> K[Create Action Items]; K --> L[Minutes of Meeting]; L --> M[Task Tracking];
```
